EDUCATION

Chitkara University
Bachelor of Engineering, Computer Science & Engineering

Punjab, India
2021–2025

TECHNICAL SKILLS

Programming: TypeScript, JavaScript, SQL
Frontend: React, Next.js, React Query
Backend: Node.js, NestJS, Express, REST APIs
Database: PostgreSQL, Redis, Prisma
Infrastructure: AWS, Docker, GitHub Actions

WORK EXPERIENCE

Software Developer Engineer
Orbitaim

June 2026–Present

- Designed and built a bulk-email microservice end to end — SES webhook ingestion, queue-based dispatch, and real-time delivery events into the campaign dashboard — integrated across the API gateway and frontend.
- Implemented a sending-reputation tier system (tiers 0–3) with sliding 24-hour send limits and bounce-based circuit breakers for bulk-email dispatch scheduling.
- Redesigned the authenticated product dashboard with shared table/pagination primitives, design-token alignment, and rebuilt home, news, leads, and settings flows.

Software Engineer
Wendor Innovations Pvt. Ltd.

June 2025–April 2026

- Optimized machine-status and order APIs by restructuring SQL queries — window functions, parameterized filters, and parallelized lookups — reducing response time from approximately 15 seconds to 3 seconds on large datasets.
- Improved dashboard load time by 40–60% by rewriting analytical SQL queries, migrating the frontend data layer to React Query, removing unused queries, and separating operational vs analytical data onto dedicated pages.
- Routed client-facing read APIs to PostgreSQL read replicas on AWS RDS, including a separate critical-read tier for high-priority endpoints.

Associate Solution Engineer Intern
FarEye Technologies Pvt. Ltd.

January 2025–June 2025

- Integrated 8+ enterprise ERP systems over REST APIs for large-scale logistics data-exchange workflows.

iOS Developer Intern
Infosys

May 2024–June 2024

- Built a hospital management REST API with JWT role-based access, a 10-model MongoDB/Mongoose domain schema, and an appointment engine with conflict validation.

PROJECTS

Scalable E-Commerce Platform

React, Express, PostgreSQL, Sequelize, JWT

- Built a full-stack e-commerce platform with a React storefront and layered Express backend (controller/service/repository) on PostgreSQL.
- Implemented Sequelize transactional order processing, JWT authentication, and admin panel and inventory management workflows.

Design 360 — Architecture Studio Portfolio

Next.js, Sanity CMS, GSAP

- Sole-built Design 360's Next.js portfolio website and Sanity CMS studio, owning the client site end to end.
- Wired Sanity publish webhooks to Next.js cache revalidation and built custom editor workflows for content management.
